

Weeder harrow HYBRO

The HYBRO weeder harrow is an advanced machine designed for the care of meadows and pastures.

The machine consists of two sections: the front section made of cast iron drag net, which levels the meadow surface, eliminates molehills, crushes animal excrement and performs initial soil aeration. The rear section elastic claws are responsible for deeper soil aeration and preparing it for grass sowing. It is possible to choose a machine with a Cambridge roller or SFERO casting. For an additional fee, the machine can be equipped with a wide range of APV catch crop seeders. „HYBRO” design is protected by utility patent no.W.122-470 & 1280-01G DE.M.
