

NOVEMBER 2025

SWING ROLLER

New models, new possibilities!
One universal frame, three rollers to choose from

KUS 30TH ANNIVERSARY

The best polish stubble cultivator now available as a NEW redesigned model

MOWERS

Four new professional grade Models available for the most demanding user.

NEW 2026 PRODUCTS !!!

We are presenting all new & modified Mandam products in this newsletter. More details are to be found in the NEW 2026 Mandam product catalog.

AGRI TECHNICA®

THE WORLD'S NO. 1

9 – 15
NOVEMBER
HANOVER
GERMANY | 20
25

Agritechnica is the world's largest trade fair for agricultural machinery and technology. It takes place in Hannover, Germany, at the Hannover Exhibition Grounds (Deutsche Messe). AGRITECHNICA is the meeting place for decision-makers and the leading business marketplace for the international agricultural sector. It is a showcase for the global agricultural machinery industry and a forum for the future of crop production. All the leading companies in the sector present their new products and innovations at the world's leading trade fair for agricultural machinery. It's already the 10th time Mandam is going to present its products in Hannover.

STAND FULL OF NEW PRODUCTS

You will find following new machines on our stand:

- SWING rollers
- Flail mowers
- GARDA heavy duty power harrow with an integrated pneumatic COMBO seeder
- DIG compact subsoiler

HALL 5 STAND B04

You will also find our most popular machines that have earned your trust over the years, including:

- SPEC HD chisel cultivator
- GAL-K XL disc harrow
- WN knife roller

5-YEARS WARRANTY

How does it work?

A customer who decides to purchase an extended warranty for their machine is charged 5% of the value of the basic version of the machine. In this way, for an additional 5%, they receive an extended warranty on the machine frame for up to 5 years.

What does the extended warranty cover?

The "5 for 5" optional extended warranty covers the frame structure of the machine – including any cracks or plastic deformations that may occur during proper use of the machine.

When can this warranty be purchased?

The extended warranty option must be purchased no later than at the time of receiving the machine from an authorized MANDAM distributor.

Do I need to notify the manufacturer about purchasing the "5 for 5" option?

No. It is the distributor's responsibility to inform MANDAM about the sale of this option for a specific machine.

*stand project

Due to changing climate conditions, rollers are an essential tool on every farm.

In MANDAM's 2026 lineup, the SWING roller will appear in a new version. From now on, SWING features a modern, durable frame design with flexible side wings that perfectly follow ground contours, large bearing housings with rubber shock absorbers, and a reinforced structure.

Customers can choose which type of roller to equip their machine with:

- Cambridge roller (MCB) – diameter 525 mm
- Aggressive STAR roller – diameter 550 mm
- Smooth ROLL roller – diameter 620 mm

NEW SWING - ONE FRAME, THREE ROLLERS

SWING MCB

SWING STAR

SWING ROLL

Modern, universal, and durable – these are the main advantages of SWING rollers.

Choose your model in one of three working widths (4.5 m, 6.2 m, or 8.3 m) and enjoy reliable, professional performance on your farm.

The KUS cultivator was the first tillage machine ever offered under the MANDAM brand.

In 1996, the first series with shear bolt protection was launched, starting the development of the KUS line. Over 30 years, several versions have been created to meet strong market demand – including the KUS S (with spring non-stop protection, still available today), the 3-beam KUS (which evolved into the TOP and SPEC HD models), the KUS H (with hydraulic tine protection), and more.

Since the beginning, KUS has been one of the cornerstone models of the MANDAM lineup.

In 2026, to celebrate its 30th anniversary, the machine will undergo a series of updates to meet modern customer expectations: new levelling disc adjustment, maintenance-free hubs, a modernized frame and drawbar, updated border discs – and much more.

MANDAM has always responded to customer feedback regarding missing machine types. One frequent request was for flail mowers. Building on our experience distributing brands such as Mühling, M.E.A.A.T. and Tifermec on the Polish market, we decided to introduce professional flail mowers into our own lineup in 2026.

PROFESSIONAL FLAIL MOWERS

MANDAM flail mowers are perfect for shredding crop residues, fallow fields, and for maintaining large green areas – such as parks, roadsides, recreational areas, and farmland.

They are also ideal for mowing vineyards and orchards, effectively cutting grass and small branches between tree rows. The shredded biomass is transformed into natural fertilizer, supporting sustainable orchard and vineyard management.

Key features include:

- Automatic belt tensioning system
- Double-walled housing
- Reinforced adjustable support wheels
- Height-adjustable skid shoes

The working height is easy and precise to adjust, allowing safe mowing close to trunks and roots without leaving the tractor's path or risking damage to young trees.

Thanks to their well-balanced design, the mowers run smoothly with minimal vibration, improving operator comfort and extending machine life.

MANDAM offers four flail mower models – MEDI, STRONG, DOUBLE, and HYD.D – with working widths ranging from 1.2 m to 2.2 m.

GARDA POWER HARROW = PERFECTLY PREPARED SOIL

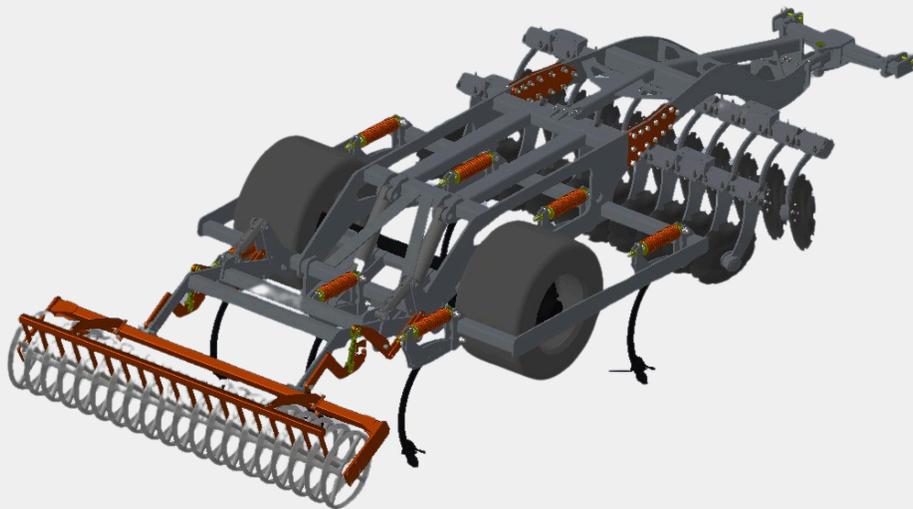

In modern farming, efficiency, precision, and reliability are key. The GARDA active harrow has been designed for farmers who want to achieve maximum soil preparation results regardless of soil type.

Thanks to its robust construction and innovative design, GARDA crushes, levels, and mixes the soil in a single pass. Its heavy-duty gearboxes, reinforced splined axles, standard stone protection and specially shaped tines ensure long service life and effective operation even in the most demanding conditions.

In combination with a pneumatic seeder it forms the GARDA COMBO, an alternative to the well-known GAL COMBO seed drill set.

DUO - THE RETURN OF THE UNIVERSAL CULTIVATOR

In today's agriculture, what matters most is quality, time, and cost efficiency. The DUO multitasking cultivator, available from Q2 2026, combines the advantages of a disc harrow and a chisel cultivator. It provides ideal cutting and mixing of crop residues in one pass and, with the option of attaching a fertilizer seeder, enables deep soil fertilization.

WN WITH DISC BEAM

Thanks to a new wave disc section, the working effect after the knife roller pass will be even better. Suspended on a leaf spring, each disc has a cutting width of 115 mm, making it perfect for working with rape, corn, or cover crops. Maintenance free hubs and section angle adjustment are standard. More about the disc beam can be found in MANDAM's promotional materials.

DIG - ALTERNATIVE TO THE GROT

With increasing droughts around the world, every drop of rain must be used efficiently.

To ensure water penetrates deep into the soil rather than remaining on the surface, the ideal tool is a subsoiler. The DIG subsoiler features hydraulically protected GROT-type tines and a hydraulically adjustable rear roller.

It is a lighter alternative to the GROT NS chisel plough.

Benefits of using the DIG subsoiler:

- Improved water retention, increasing crop resistance to drought
- Loosening of the plough pan, enhancing root growth
- Higher yields due to easier nutrient uptake
- Improved soil structure and reduced erosion

OTHER NEW FEATURES

New seeder holders with integrated platforms available for cultivators and disc harrows to facilitate loading and servicing of machine mounted seeders.

A new toothed roller is available for all subsoilers equipped with roller attachments starting this season.
